Subject: **Parcel D Site Investigation and Excavation Report**  
Boeing C-6 Facility, Los Angeles, California

Dear Mr. Anijelo:

On behalf of the Boeing Realty Corporation, Integrated Environmental Services, Inc. is pleased to submit the revised report which provides the results of the approved sampling and analysis work plan for the Parcel D Site Investigation (IESI 1999). As a result of the investigation, total arsenic was the only compound identified above its respective health-based remediation goal (HBRG). A single soil sample exhibited a concentration of 18 mg/kg, which exceeded the HBRG (background concentration) of 14 mg/kg.

Arsenic-impacted soil was delineated over an area measuring approximately 400 by 200 feet, to depths between 1.5 to 2.5 feet below ground surface (bgs). Based on the delineation findings, arsenic-impacted soil was excavated over an area measuring approximately 400 by 300 feet, to depths between 1.5 and 2.5 feet bgs. The Parcel D Site Investigation and Excavation report presents the delineation and excavation program implemented at the site.

Based on the site investigation samples and post-excavation confirmation samples, it is our opinion that no further soil remediation is warranted. As agreed, however, the final determination of soil closure will be based on the results of the post-demolition risk assessment of Parcel D.

As always, I appreciate your support and guidance on this important project. If you have any questions, please feel free to contact me at (949) 852-9050, extension 14.

Very truly yours,

  
Joann P. Ornelas  
Program Manager
